Omega DB Scanner TM App for Splunk [®]

For Oracle Database

Security posture of your mission-critical Oracle databases delivered to Splunk!

Free to use in live, production, commercial and test systems!

Omega DB Scanner App for Splunk - Highlights

- Increase visibility on the security posture of your mission critical Oracle databases
- Centralized storage of security scan assessments results
- Historical scan data reporting
- Splunk visualization standards
- Comparison of two scans, Run vs. Baseline
- Multiple database support
- Minimal Splunk index storage (few Mb per database scan), periodical scans other than continuous logs, ensures virtually zero space requirements on a working Splunk Enterprise.

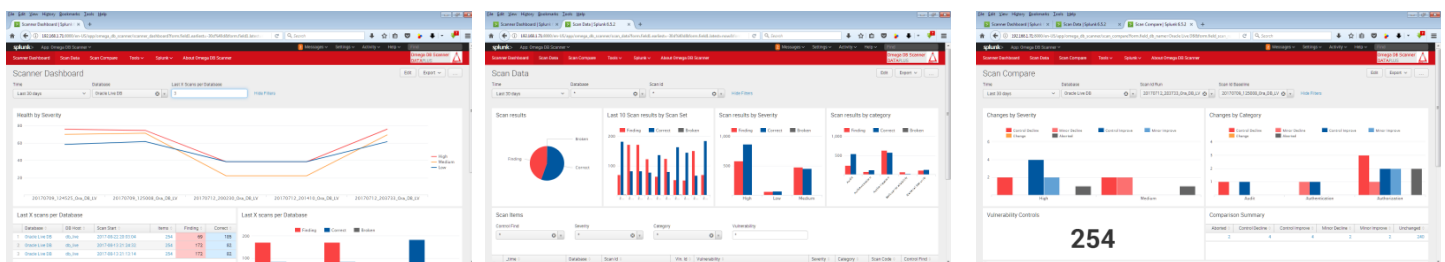

Omega DB Scanner App for Splunk integrates the Omega DB Scanner software solution with the Splunk SIEM system.

Security posture of your Oracle databases periodically delivered to Splunk enables storage of your scans results in a central location, visualization and quick access of your scan data history; and assessment of the former via the graphical interface of our App running on the commodity of the Splunk system.

Omega DB Scanner App for Splunk receives scan results data produced from:

- Omega DB Scanner Standalone (and Free) edition
- Omega DB Scanner Professional edition *

* release date is scheduled for November/December 2017
